

ProPress System

The ProPress System is a system of joining copper tubing. Whether the application calls for small or large diameter copper lines...potable water, hydronic heat or chilled water applications... new construction, maintenance or emergency repair work, the ProPress System is becoming a popular choice for copper tubing.

Its benefits include:

• It's Faster

ProPress is faster than soldering, taking as little as four seconds to join two pieces of tubing, regardless of size. Because there's no solder, you can eliminate time-consuming preparations for soldering and cleanup. Installers can be more productive, and installations more profitable.

• It's Flameless

There's no flame with a crimped connection, so there are no gas tanks or hoses required, no chance of damaging surroundings from heat, and no need for fire protection precautions. ProPress is reliable for refurbishments and repairs because water pockets and dripping water have no effect on crimping.

• It Saves Money

Save on average a third of the time you would have spent before.
